

Business AI Tools: Effective ChatGPT Communication

Module 2: Business Data, Evaluation & Project Planning - Session 2.4 Lecture Notes

SESSION OVERVIEW

Session 2.4: Market Strategy & Customer Personas

Target Academic Audience: Undergraduate & Graduate (MBA) Business Students.

Core Pedagogical Premise: Create realistic customer profiles (personas) to help design marketing and sales messages.

- **Duration:** 3 Hours (180 Total Contact Minutes)
- **Delivery Ratio:** 1:2 (50 Min Lecture + 120 Min Hands-On Labs)
- **Public Practice Data:** Pew Research Center - Internet, Technology & Consumer Trends - Free public survey data on how different age groups shop and use technology.

THE 3-HOUR SESSION RHYTHM

Curriculum Architecture & Timetable

Hour 1 (50 Min): Concept Lecture & Demonstration

Theoretical Foundations and The "Clone Persona" Trap in AI, enterprise operational risks, and live prompt grounding.

Hour 2 (50 Min): Guided Lab (Exercise 1)

Basic - Contrasting Buyer Personas: Step-by-step audit protocol using live business data sources.

Hour 3 (50 Min): Applied Business Challenge (Exercise 2)

Advanced - Objection Handling Simulation Dialogue: Unstructured operational dilemma and executive decision deliverables.

Session Blueprint & Three Executive Learning Objectives

Bridging theoretical prompt mechanics with organizational productivity workflows

OBJECTIVE 1 - FOUNDATIONS

Theoretical Foundations

Master the underlying principles and components:

- Understand computational mechanics and information boundaries.
- Eliminate conversational ambiguity in business instructions.
- Recognize model interpretation patterns across business functions.

OBJECTIVE 2 - STRATEGY

The "Clone Persona" Trap in AI

Deploy structured prompt engineering frameworks:

- Establish explicit role, context, and structural boundaries.
- Apply modular prompt architectures to prevent instruction drift.
- Standardize repeatable team templates for recurring office tasks.

OBJECTIVE 3 - EXECUTION

Audited Business Delivery

Enforce quality control and workplace audit readiness:

- Audit model outputs against hard facts and source data.
- Resolve multi-issue operational bottlenecks with AI support.
- Deliver boardroom-ready briefs and verifiable action steps.

Theoretical Foundations

Translating foundational principles into scalable organizational execution

FOUNDATIONAL MECHANISM

Operational Architecture

- Core Driver:** Precise contextual parameters eliminate model guesswork.
- Information Hygiene:** Explicit delimiters protect source data integrity.
- Domain Calibration:** Setting professional role constraints aligns vocabulary.

MANAGEMENT IMPLICATIONS

Organizational Productivity Impact

The Cost of Unstructured Prompts

Vague instructions produce generic drafts requiring multiple cycles of manual editing, wasting hours of senior executive time.

First-Try Workplace Deliverables

Structured prompt architecture guarantees workplace-ready outputs on the initial attempt, accelerating cycle times by 3x to 5x.

Audit Governance Rule

Treat AI as a junior assistant: Always verify numerical claims, policy dates, and regulatory statements against primary source records.

The "Clone Persona" Trap in AI: Strategic Showdown

Comparative evaluation of contrasting business approaches and execution frameworks

FRAMEWORK A: UNSTRUCTURED / BASELINE

Conventional Approach

Ad-Hoc & Unconstrained Execution

PILLAR 1: INPUT SPECIFICATION

Conversational prompts lacking explicit business background, role, or formatting boundaries.

PILLAR 2: OUTPUT CONTROL

Model generates generic, platitude-heavy drafts that miss key commercial nuances and data points.

PILLAR 3: FAILURE MODE

Requires 2 to 4 rounds of tedious follow-up prompting to extract acceptable business formats.

LIMITATION: High Review Overhead & Inconsistent Results

VS

FRAMEWORK B: MODULAR ARCHITECTURE

Engineered Execution

Role, Context, Constraints, Schema

PILLAR 1: INPUT SPECIFICATION

Structured parameters with explicit delimited data, personas, and negative constraints.

PILLAR 2: OUTPUT CONTROL

Deterministic formatting schemas (bullet counts, tables, tone) strictly enforced.

PILLAR 3: OPERATIONAL BENEFIT

Delivers executive-ready deliverables on initial attempt, reducing editing time by 80%.

ADVANTAGE: Repeatable, First-Try Commercial Quality

Operational Takeaway:

Transitioning from ad-hoc chatting to modular prompt engineering converts generative models into enterprise-grade productivity engines.

Connecting Personas to Marketing Hooks

Safeguarding organizational accuracy, compliance, and strategic alignment

RISK ANALYSIS & CASE STUDY

Corporate Exposure & Governance

How to use persona pain points to write tailored value proposition headlines that directly neutralize customer hesitations. ![Session 2.4 Conceptual Framework: Jobs-to-Be-Done and Contrasting Customer Personas](images/session_2_4_key_concept.png)

- **Hallucination Liability:** Courts hold enterprises strictly accountable for statements generated by customer-facing AI agents.
- **Privacy & IP Protection:** Never ingest sensitive proprietary formulas, customer PII, or non-public financial records into public models.
- **Negative Constraints:** Explicitly instruct the model what NOT to do to enforce compliance boundaries.

EXECUTIVE GUARDRAILS

Three Mandatory Workplace Defenses

Guardrail 1: Grounded Source Ingestion

Always enclose verified primary datasets inside clear text delimiters (### or ---) so the model synthesizes known facts rather than guessing.

Guardrail 2: Explicit Refusal Directive

Mandate in the prompt: "If the requested metric is not found in the provided source text, state 'Information not available in source data'."

Guardrail 3: Human Verification Sign-Off

Enforce a strict managerial review protocol for all public, financial, legal, and board-level documents before external dispatch.

Prompt Architecture: Naive Request vs. Engineered Solution

Side-by-side diagnostic benchmark demonstrating the operational impact of structural constraints

APPROACH A: NAIVE REQUEST (WEAK)

Create two customer personas for our new mobile personal budgeting app.

PILLAR 1: STRUCTURAL FLAWS

Creates "clone personas" (e.g., "Sarah, 24" and "Mike, 26") who share the exact same cheerful attitude, identical tech-savviness, and equal...

PILLAR 2: OUTPUT CHARACTERISTIC

Rambling introductory platitudes, inconsistent schemas, and absence of actionable business next steps.

PILLAR 3: ENTERPRISE RESULT

Unusable draft that requires complete manual rewriting by human staff.

RESULT: Unusable Draft Requiring Manual Revision

VS

APPROACH B: ENGINEERED ARCHITECTURE (STRONG)

You are a Strategic Marketing Director applying Clayton Christensen's Jobs-to-be-Done (JTBD) framework.

Create two sharply contrasting, realistic consumer personas for a new \$4.99/month budgeting app:

- Persona A (The Stressed Gig Worker): Age 21, irregular weekly income, price-sensitive, highly skeptical of subscription fees.
- Persona B (The Busy Household Manager): Age 44, stable salary, managing family expenses, worried about data privacy and bank account security.

```
For each persona, detail:
[... constrained specifications ...]
```

PILLAR 1: STRUCTURAL SUCCESS

Anchors personas in real behavioral friction and contrasting purchasing objections, providing actionable hooks for marketing copy.

PILLAR 2: OUTPUT CHARACTERISTIC

Precise schema adherence, executive tone, and zero conversational filler.

PILLAR 3: ENTERPRISE RESULT

Immediate workplace-ready deliverable on the very first prompt execution.

RESULT: Workplace-Ready on First Generation Attempt

Takeaway:

Explicit constraints and schemas eliminate conversational pleasantries and guarantee repeatable executive quality.

Guided Lab: Basic - Contrasting Buyer Personas

Public Dataset: Pew Research Center - Internet, Technology & Consumer Trends - Free public survey data on how different age groups shop and use technology.

STEP-BY-STEP LAB EXECUTION PROTOCOL

Guided Lab Implementation Steps

- Step 1 (Data Inspection):** Access the public business dataset and extract the target sample records requested in the exercise scenario.
- Step 2 (Baseline Execution):** Deploy an unconstrained baseline prompt and observe the limitations in schema control and domain precision.
- Step 3 (Engineered Architecture):** In a fresh chat window, deploy the modular prompt architecture with explicit role, delimiters, and schema bounds.
- Step 4 (Audit & Scoring):** Compare Output A vs. Output B across Usefulness, Accuracy, and Executive Voice, recording findings in the Student Worksheet.

STUDENT DELIVERABLE & SCORECARD

Prompt Audit Matrix

Evaluation Metric	Naive	Engineered
Operational Usefulness	1 - 2 / 5	4 - 5 / 5
Factual Accuracy	2 - 3 / 5	5 / 5
Executive Voice & Tone	2 / 5	5 / 5

Workbook Companion: Document detailed comparative diagnostic notes in *Business_AI_Tools_Student_Worksheets.docx*.

Executive Challenge: Advanced - Objection Handling Simulation Dialogue

Solving complex organizational dilemmas under strict operational constraints

THE BUSINESS SCENARIO

Commercial Dilemma

- Scenario: Using the exact same consumer personas developed in Exercise 1, focus on the skeptical student persona who refuses to pay \$4.99/month because "free spreadsheets already exist". - Task: Engineer an interactive roleplay prompt where ChatGPT acts as the skeptical...
- **Decision Complexity:** Balance multiple conflicting stakeholder priorities and commercial trade-offs.
- **Guardrail Enforcement:** Prevent defensive excuses, unapproved commitments, and speculative calculations.
- **Stakeholder Synthesis:** Deliver simultaneous outputs for both external partners and internal operating units.

MANDATORY DELIVERABLES

Two-Tier Executive Output Requirements

Deliverable A: External Communication

Draft a polished, empathetic, and professional communication following strict negative constraints and concise word boundaries.

Deliverable B: Internal Action Brief

Formulate a structured 3-bullet internal operational action brief addressed to executive leadership detailing triage priorities and root-cause solutions.

Session 2.4 Executive Summary & Managerial Checklist

Four enduring principles for deploying generative tools in enterprise operations

CORE PRINCIPLES

Four Managerial Commandments

- **1. Structural Rigor:** Always define Role, Context, Task, and Schema to guarantee first-try workplace utility.
- **2. Delimited Ingestion:** Enclose primary business data inside clear delimiters to prevent instruction bleed.
- **3. Explicit Negative Bounds:** Specify what the AI must NOT do to eliminate conversational filler and hallucinations.
- **4. Institutional Ownership:** Enterprises remain 100% accountable for AI outputs. Always verify facts before dispatching.

COURSE CONTINUUM

Preparation for Next Module / Session

Coming Next: Session 3.1.

- Expand prompt engineering toolkits into complex cross-functional business workflows.
- Deepen hands-on data manipulation and multi-stage reasoning protocols.
- Build verified artifacts for your professional AI Prompt Portfolio.
