What should AI do when key campaign details are missing?

Social Campaign Brief

Product / Focus
Reusable bottle

Target audience
Local students

Budget	Not provided
Channel	Not provided
Success measure	Not provided

What problem are we solving?

3 hours: 50-minute lesson, 10-minute break, 50-minute guided practice, 10-minute break, 50-minute applied practice, and 10-minute wrap-up.

SITUATION

The problem

A campaign prompt can produce a polished plan even when the budget or audience is missing. A confident-looking guess can mislead the team.

TARGET

Learning goal

Test a prompt with complete and incomplete inputs, then add a useful fallback for missing information.

Practice material: Use the practice material supplied in the session Markdown.

Use these supplied facts

Do not replace missing information with guesses.

CASE MATERIAL

Practice request

- "Plan a two-week social campaign for a new reusable bottle. We want more local students to learn about it." Budget, channel, and success measure are not specified.

BOUNDARY

Use the supplied facts

A campaign prompt can produce a polished plan even when the budget or audience is missing. A confident-looking guess can mislead the team.

Understand the idea and apply it

Work through the explanation before comparing prompts or starting the exercise.

LEARN

Find the inputs a recommendation depends on

- The practice request identifies a reusable bottle and local students, but does not state budget, channel, or success measure. Those gaps matter because they affect spending and how the team evaluates the campaign. A polished AI plan does not make missing facts true.

LEARN

Choose a fallback that matches the missing detail

- The prompt can ask a few important questions, mark unknown fields "To confirm," or draft a limited outline that avoids spending recommendations. Do not ask questions that would not change the next step. Do not invent a budget, channel, or sales result to make the plan look complete.

Understand the idea and apply it

Work through the explanation before comparing prompts or starting the exercise.

LEARN

Test the fallback with complete and incomplete inputs

- Run the same prompt first with the original incomplete request and then with the supplied $300 budget and goal of 100 local page visits, leaving the channel unspecified. The prompt should use the known budget and goal while presenting channel ideas as options to approve. Compare the two outputs and check that neither invents missing details.

APPLY

Three-step method

- Run a baseline prompt; note any invented or unclear detail; add one fallback rule and rerun the same case.

What makes a prompt weak?

These examples come from the current session scenario.

AVOID

Weak example 1

```
Create the perfect campaign.
```

AVOID

Weak example 2

```
Assume a $10,000 budget and promise strong sales.
```

A clearer, safer prompt

Keep the source, task, constraints, and output check visible.

USE

Improved example 1

```
List the known campaign facts and the missing
details.
Do not invent a budget, channel, or performance
result.
Ask up to three questions that would materially
change the plan.
```

USE

Improved example 2

```
Draft a low-cost planning outline using only the
known facts.
Mark budget, channel, and success measure as "To
confirm";
do not recommend spending or claim expected
sales.
End with the three questions needed before
launch.
```

Exercise 1: Follow the steps

Use the complete case and instructions from the session Markdown.

GUIDED PRACTICE

Exercise 1: Follow the steps

- Run Poor 1 on the practice request. Record any invented details. Run Good 1 and compare whether it identifies the same gaps without pretending to know the answers.

Exercise 2: Try a small variation

Use the complete case and instructions from the session Markdown.

APPLIED PRACTICE

Exercise 2: Try a small variation

- Add a budget of $300 and a goal of 100 local page visits; keep the channel unspecified. Revise the prompt so AI can suggest channel options but marks them as choices to approve, not settled facts.

Write your session report

Use Report_template.docx in Microsoft Word. Save it as FirstName_StudentID_W14_Keyword.docx and upload it to iLearn by 23:59 on class day.

SUBMIT

One report for this session

- Introduction: Explain the risk of a polished campaign plan built on missing information.
- Method: Copy the before and after prompts.
- Results: Include the test log: missing inputs, what the AI did, and the improvement.
- Conclusion: Explain how the patched prompt handles missing facts, and one remaining risk.

How to know the work is complete

Check your report before you hand it in.

VERIFY

Success check

- The patched prompt neither invents missing facts nor blocks a limited, clearly labeled planning draft.
