

What customer details should stay out of an unapproved AI tool?

Customer message

Hi, I'm having an issue with my recent invoice. Can you take a look?

 Name:

 Phone:

 Account ID:

 Invoice ID:

Safe summary for AI

Customer is having an issue with a recent invoice and needs a reply. Draft a helpful, professional response without including any personal or account details.

Human review

- ☒ No identifying details
- ☒ Clear and accurate
- ☒ Appropriate for sharing

Approval required

AI tool

What problem are we solving?

3 hours: 50-minute lesson, 10-minute break, 50-minute guided practice, 10-minute break, 50-minute applied practice, and 10-minute wrap-up.

SITUATION

The problem

An employee wants AI to draft a customer response, but the source message contains identifying and account information that should not be pasted into an unapproved tool.

TARGET

Learning goal

Identify sensitive information, minimize or replace it when permitted, and check workplace rules before using AI.

Practice material: Use the practice material supplied in the session Markdown.

Use these supplied facts

Do not replace missing information with guesses.

CASE MATERIAL

Practice message (fictional)

- "Mina Park, account 84721, called 555-0184 about invoice 3029. She says the package arrived damaged and asks what to do." Treat names, phone numbers, and account or invoice identifiers as sensitive for this exercise.

BOUNDARY

Use the supplied facts

An employee wants AI to draft a customer response, but the source message contains identifying and account information that should not be pasted into an unapproved tool.

Concepts for this problem

Keep each concept tied to the practical decision.

UNDERSTAND

Core concepts

- Personal or confidential data can include names, contact details, account IDs, health details, employee records, and internal business information.
- Removing a name may not anonymize information if other details still identify a person.
- Follow your organization's approved-tool and data-handling rules. If the rule is unknown, do not upload the data; ask the responsible person.
- Human review is still needed: check facts, policy, tone, and whether the response exposes private details.

APPLY

A simple method

- Identify what is sensitive; check whether the tool and task are approved; minimize data and review the output before use.

What makes a prompt weak?

These examples come from the current session scenario.

AVOID

Weak example 1

Here is Mina's phone and account number. Write a reply.

AVOID

Weak example 2

I removed her name, so this is definitely anonymous; decide whether she deserves compensation.

A clearer, safer prompt

Keep the source, task, constraints, and output check visible.

USE

Improved example 1

Before using AI, list the data fields in this sample that should be removed or replaced. Do not draft a reply or repeat the identifiers.

USE

Improved example 2

Assume company policy permits an approved AI tool for this task. Draft a neutral reply using only: item arrived damaged; customer asks for next steps. Ask the customer to use the secure support channel to provide order details. Do not promise a refund or repeat identifying information.

Exercise 1: Follow the steps

Use the complete case and instructions from the session Markdown.

GUIDED PRACTICE

Exercise 1: Follow the steps

- Mark each sensitive field in the practice message. Create a minimized version that says only "customer reports a damaged package and requests next steps." Note that this classroom exercise does not authorize uploading real customer data.

Exercise 2: Try a small variation

Use the complete case and instructions from the session Markdown.

APPLIED PRACTICE

Exercise 2: Try a small variation

- Using only the minimized description and the assumption that the tool is approved, draft a short reply that directs the customer to the secure support channel. Review it for invented policy promises and private details.

How to know the work is complete

Check the output before sharing or acting on it.

SUBMIT

Deliverable

- A marked-up data minimization example, safe prompt, and human-review checklist.

VERIFY

Success check

- No unnecessary identifier is included, tool approval is treated as a required check, and the draft makes no unsupported promise. ### Module 4: Everyday Workflows & Your AI Portfolio Module 4 turns useful one-off prompts into repeatable work habits. Students learn to make templates, test missing-information cases, choose useful prompts, and document a small portfolio that another person can safely use.
